PROFESSIONAL SUMMARY

BSc (Hons) Information Technology undergraduate at SLIIT (Year 3, expected graduation 2028), seeking a Software Engineering Internship to apply strong fundamentals in Java, Spring Boot, and full-stack development within a professional engineering team. Hands-on experience building and deploying production applications with RESTful API design, MVC architecture, and relational/NoSQL databases, including a live platform with role-based access and payment integration. Led multiple 6-member teams through end-to-end delivery - from requirements to deployment - using Agile practices, Git version control, and collaborative code review. Strong grounding in Data Structures, Algorithms, and Object-Oriented Programming from coursework, with a genuine enthusiasm for problem-solving and learning from experienced engineers. Available for a mandatory 6-month industrial internship as part of my SLIIT degree program, full-time.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python (Data Preprocessing, OpenCV, TensorFlow)

Frameworks: Spring Boot 3.x, Spring Security, Spring Data JPA, React.js

API & Architecture: RESTful API Design, MVC Architecture, Cloudinary API, Groq API (Llama 3)

Databases: MySQL, MongoDB, SQL Server (SSMS), Normalized Relational Schema Design

Web Technologies: HTML5, CSS3, Thymeleaf, Responsive UI Design

Testing: Postman (API testing), Manual/Functional Testing

Tools & Platforms: Git, GitHub, Maven, IntelliJ IDEA, VS Code, Docker (learning)

Machine Learning: TensorFlow, Keras (ImageDataGenerator), OpenCV, NumPy, CNN Preprocessing

AI & Voice: SpeechRecognition, Pytsx3, NLU with Meta Llama 3, OS Automation

Methodologies: Agile / Scrum, Sprint Planning, Code Review, Git Flow

PROJECTS

Parkify - Smart Parking Management System

Feb 2026

Technologies: React.js, Java (Spring Boot), MongoDB, Stripe API, Cloudinary | *Role:* Project Leader (6-member team)

GitHub: <https://github.com/IT24101654/Parkify---Parking-Management-System.git>

Live Demo: <https://parkify-frontend.onrender.com>

- Architected a production-grade Spring Boot REST API serving 3 concurrent user roles (Admin, Owner, Driver), achieving sub-200 ms average response via MongoDB indexing and Spring Security role-based access control.
- Delivered a live-deployed multi-role parking platform supporting real-time slot allocation, reservations, and vehicle service management across 3 distinct user workflows.
- Integrated Stripe for end-to-end payment processing and Cloudinary for real-time vehicle image management, resulting in a fully functional live demo with zero critical post-launch defects reported.

J.A.R.V.I.S. - AI-Powered Voice Assistant

Jun 2026 – Ongoing

Technologies: Python, Groq API (Llama 3), SpeechRecognition, Pytsx3, OS Integration | *Independent Project*

GitHub: <https://github.com/IT24101654/J.A.R.V.I.S.git>

- Independently engineered an intelligent voice-controlled assistant with real-time speech recognition and synchronized TTS output, enabling fully hands-free, low-latency interaction.
- Integrated Meta Llama 3 via Groq API to deliver context-aware multi-turn NLU — moving beyond basic keyword matching to genuine conversational intelligence.
- Implemented autonomous OS automation allowing the assistant to search, locate, and launch files, folders, and applications by voice, eliminating manual navigation for routine tasks.

NeoSchool - Web-Based School Information Management System

Oct 2025

Technologies: Java (Spring Boot), MySQL, HTML/CSS, JavaScript, Thymeleaf | Role: Project Leader (6-member team)

GitHub: <https://github.com/IT24101654/NeoSchool.git>

- Led a 6-member team to deliver NeoSchool end-to-end in under 8 weeks — a Spring Boot MVC platform consolidating student records, exam management, and library services for 500+ student records into a single unified system.
- Designed a normalized MySQL relational schema with referential integrity to handle large-scale school data, minimizing redundancy and supporting complex multi-entity queries.
- Enforced session-based access control and server-side input validation across all admin modules, securing the platform against unauthorized access and invalid data entry.

EcoLeaf - Plant Disease Prediction Pipeline

Oct 2025

Technologies: Python, TensorFlow, Keras, OpenCV, NumPy | Role: Project Leader (6-member team)

GitHub: <https://github.com/IT24101654/EcoLeaf-AIML.git>

- Led a 6-member team to design and implement an automated CNN image preprocessing pipeline covering 10+ crop disease classes.
- Boosted training data 5× via a 5-technique Keras augmentation pipeline (rotation, shift, shear, zoom, flip), reducing overfitting and measurably lifting multi-class classification accuracy.
- Coordinated multi-stage image standardization — median filtering, histogram equalization, and tensor-based resizing — ensuring consistent input quality across all crop classes.

EDUCATION

BSc (Hons) in Information Technology

2024 – Present

Sri Lanka Institute of Information Technology (SLIIT) | Specialization: Information Technology

- Year 3 in progress; strong academic grounding in Object-Oriented Programming, Data Structures, Algorithms, and Database Management Systems.
- Delivered multiple full-stack academic projects applying modern Java, web, and database technologies within team environments using Git/GitHub for version control.

Diploma in Information Technology

2022 – 2023

ESOFT Metro Campus

- Built foundational knowledge in programming, networking, and computer systems through practical coursework and mini projects.

G.C.E. Advanced Level (Mathematics Stream)

2022 / 2023

G.C.E. Ordinary Level

2019

WORK EXPERIENCE

Finance Intern — Cashier / Finance Assistant

Jun 2022 – Aug 2022

Vallibel Finance PLC | Colombo, Sri Lanka

- Processed daily cash transactions and payment handling, developing accuracy and attention to detail in a regulated financial environment.
- Supported basic financial record management and client-facing services, gaining professional workplace experience prior to undergraduate studies.
